Our Food Security, Solved
Grow Anywhere With Hydroponics

www.desertagri.com

Desert Agriculture is solving the desert kingdom's food security challenge through innovative, sustainable hydroponics systems for food production. Designed even for our desert climate, our hydroponics system technology accelerates food production by growing crops in much higher yields, while using a fraction of resources such as land and water compared to traditional methods. As a subsidiary of Aljoaib Holdings, we draw on nearly 25 years experience in the agriculture industry to bring the latest technology to evolve with the needs of Saudi farmers.

DESERT AGRICULTURE

رؤية ٢٠٣٠
2030
المملكة العربية السعودية
KINGDOM OF SAUDI ARABIA

- Retrofit greenhouses with automated hydroponics systems
- HydroFarms, design & construction of enclosed self-contained hydroponics systems
- Yield and product quality control
- Installation, training and O&M

Grow in the Desert

Through our hydroponics systems technology, Desert Agriculture aligned with Saudi Vision 2030's goal of a sustainable future provides a solution to the Kingdoms food security crisis. By empowering local farmers to grow anywhere in much higher yields, while using a fraction of resources such as land and water.

The Farmer's Burden

The water crisis in the gulf has made it impossible for farmers to grow food, or even benefit from more than one season for specific produce. Farmers have been forced to compete with imported vegetables which can be preferred over locally grown vegetables and leafy greens at the expense of quality and costs... until now.

Desert Agriculture Is the Answer

Our Hydroponics system allows farmers to grow their own vegetables and leafy greens at their own facility at any scale. Without the need for soil, in a controlled system, much less water is required to grow sustainable yearround produce. Our hydroponics systems are designed specifically for the desert climate to optimize production.

Saves Water

Hydroponic systems can save as much as 95% of water compared to traditional methods.

Saves Time

Hydroponics speeds up plant growth by about 20%, so you can produce more crop in a short amount of time.

High Quality

Because it's locally grown, you have fresh, healthy & pesticide free crops at all times.

Scalable Efficiency

Grow significantly more with less space than traditional farming. Multiple growth cycles per year & off seasonal crops, the contained system can be scaled to your needs, and expand as demand rises.

About the Brand

We are a Saudi company with international standards. All of our products are grown in greenhouses using modern technology, which is hydroponics without soil, as it does not contain any chemicals, industrial fertilizers, or pesticides. We supply fresh produce on a daily basis using refrigerated trucks to ensure quality.

Our Hydroponic Produce

Kale 250g

Basil 100g

Rosemary 100g

Oregano 100g

Thyme 100g

Sage 100g

Our Hydroponic Produce

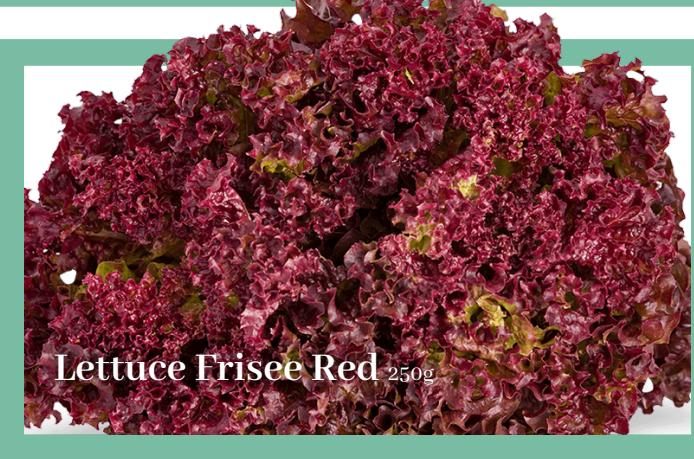

Lettuce Frisee Green 250g

Lettuce Lollo Bionda 250g

Lettuce Five Stars Red 250g

Lettuce Frisee Red 250g

Lettuce Lollo Roso 250g

Lettuce Five Stars Green 250g
